

Fiber Deck Restoration System

Description

Fiber deck is a deck restoration system that is designed to restore the original integrity of an existing walking deck system plus increase its' waterproofing characteristics. Fiber Deck will also enhance the overall aesthetic appeal of any building.

The Fiber Deck System utilizes high quality acrylic resins combined with premium fiberglass reinforcement followed by a handsome knockdown trowelled finish.

Fiber Deck is designed for use upon such existing deck systems as **concrete, polymer modified concrete, pre-sealed magnesite, elastomeric and other various proprietary systems.** Fiber Deck may also be used as a topcoat system to the any other Systems (subsequent to second waterproof Base application).

Prior to Use

Existing deck surfaces must be dry, clean, free of grease, oil, dirt, wax, or other foreign matter. Make certain that previously applied coatings or deck systems are secure prior to installation. Proper patching of the old system should be done prior to installation.
